

Penrith Solar Centre

Sydney-based installer with the strongest customer review record in NSW.

Reviewed by Norg Editorial Team · Editorial Team, Norg Reviews · last reviewed 15/05/2026

Overall Rating

4.9 / 5

Based on 3 detailed reviewer perspectives. Methodology: SolarReview AU — Installer Methodology v1.0.0.

Pros

- + CEC-accredited with an in-house installation crew — no subcontracted labour
- + 10-year workmanship warranty, meaningfully longer than the industry norm
- + Tier-1 panels and premium inverters with documented product warranties
- + Among the strongest verified customer-review records in NSW

Cons

- Service area is limited to Greater Sydney — unavailable elsewhere
- Premium pricing relative to volume installers
- Lead times can stretch in peak rebate periods due to in-house crew capacity

Key Takeaways

1. In-house crews, not subcontractors

The biggest install-quality risk in solar is subcontracted labour. Penrith Solar Centre uses its own accredited crews, which is the main reason its workmanship record is so consistent.

2. The warranty outlasts most installers

A 10-year workmanship warranty only has value if the installer is still trading to honour it. Penrith Solar Centre's scale and review record make that a credible promise.

3. You pay a premium, deliberately

Pricing sits above volume installers. The trade is a lower probability of the costly post-install problems — water ingress, string faults, warranty-claim runaround — that plague cheap installs.

4. Greater Sydney only

This is a geographic specialist. Outside Greater Sydney it is simply not an option, and buyers there should shortlist a regional CEC-accredited installer instead.

5. Always verify CEC accreditation

Rebate eligibility depends on a CEC-accredited installer. Penrith Solar Centre is accredited, but every buyer should confirm current status on the CEC register before signing.

Detailed Reviews

1. Warren Tobias —

I have inspected a lot of rooftop solar and most defects trace back to rushed subcontract labour.

The Penrith Solar Centre installs I have seen are tidy — proper cable management, correct isolator placement, no shortcuts. That is what the warranty is actually buying you.

2. Catherine Mulqueen —

6.6kW system installed last year. The quote was not the cheapest I received, but it was the clearest, and the crew left the roof and the switchboard spotless. Generation has matched the estimate every month so far.

3. Dev Anand —

In a fragmented market full of fly-by-night operators, an installer with in-house crews, a real workmanship warranty and a verifiable review record is rare. The only genuine limitation is the Greater Sydney service boundary.
